Click TeX Refresh (F5) to update table of contents.

Example 2

An example full frame video using the **basic syntax** is on this slide.
This will play externally using default player.

Example 2: Test Graphics Path

An example of a single frame video using the graphics path. If this doesn't work, the next slide shouldn't work.

Example using animate

Here is an example using the animation package for playing within the pdf.

Footnote Cite Demo

- articles:
  einstein1905 versus **einstein1905** We can also add abbreviated footnote citations[einstein1905] , which is good. We can cite it again and say **einstein1905** [**einstein1905**] is an excellent paper. Remember to call ctfoot if you want the bibliography to print out at the bottom
  yoon versus **yoon**

- books:
  salam versus **salam**
  moraux versus **moraux**
  pines versus **pines**

[einstein1905] einstein1905 (einstein1905). einstein1905

Presentation Outline

You can use \section and \subsection commands to define outline of your presentation.

These commands must be appeared between frames. Insert they manually in text source window.

To take correct outline under TEX-Word click F5 key.

The easiest way to create overlays is in using the \pause command. Like following ...

- ▶ This item is before pause (look source window)

The easiest way to create overlays is in using the \pause command. Like following ...

- ▶ This item is before pause (look source window)
- ▶ If you don't see overlay read explanation below ...

Overlay expansion may be enabled/disabled in dialog opened by 'Insert/Document Properties' menu command.
'*Overlays Mode=**Handout***' – disables overlay expansion.
It is default setting of this template, because this mode is convenient at first stage of developing slides.
'*Overlays Mode=**Beamer***' – enables overlay expansion.
It is useful at final editing for handling overlays and for generating final slides in form of PDF file.

Advanced Overlays

Beamer includes more ways for handling overlays. . .

- using the pause command:
  - First item.

Advanced Overlays

Beamer includes more ways for handling overlays. . .

- using the `pause` command:
  - First item.
  - Second item.
- using overlay specifications:

- using the general `uncover` command:

To learn more about Beamer package read original documentation.

Conclusion

Clicking right mouse button (press+release without intermediate mouse moving) displays context menu which have two commands specific for beamer package:

- Delete the Frame – removes current frame.
- Duplicate the Frame – easiest frame populating.

The button at left edge of text tool bar lets you insert blank slide in your presentation.
